AI ASSISTED CODING

Assignment-14.5

Name:B.Mahanand

Batch:35

Ht.No:2303A52462

Task 1 – Image Gallery Website

Create an image gallery web page.

Requirements:

• Display images in a grid layout.

• Use AI to:

o Optimize layout using CSS Grid.

o Add hover zoom or overlay effects.

o Ensure mobile responsiveness.

Image Gallery HTML Structure

This HTML code defines the basic structure of the image gallery, including a header, a main gallery container, and several image items with placeholder images.

[11] ✓ 0s

```
html_code = """
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">

Task 2 – Profile Card Generator

Create a profile card web page.

Requirements:

• Display user image, name, role, and social media links.

• Use AI to:

o Suggest modern UI colors and fonts.

o Design the card using Flexbox.

o Add hover animation and shadow effects

Profile Card HTML Structure

This HTML sets up the basic layout for the profile card, including placeholders for an image, name, role, and social media links.

    f.write(js_code)

print("JavaScript code saved to script.js")
```

```
JavaScript code saved to script.js
```

Instructions to View Your Role-Based Access Control Application

1. **Run the Python cells above:** This will create three files in your Colab environment: `index.html`, `style.css`, and `script.js`.
2. **Download the files:**
   - In the Colab file browser (the folder icon on the left sidebar), locate `index.html`, `style.css`, and `script.js`.
   - Right-click on each file and select 'Download'.
3. **Open `index.html`:** Once downloaded to your computer, open the `index.html` file with your web browser (e.g., Chrome, Firefox, Edge).

You should now see the application. Click on the different 'Login as...' buttons to observe how the content changes based on the assigned role, demonstrating conditional UI rendering and secure state transitions!

Task 5 – Multi-Language Website

Design a multilingual website.

Requirements:

• Switch languages dynamically.

• Persist language preference.

• Use AI to:

o Structure translation files.

o Handle RTL/LTR layouts.

o Improve accessibility.

This HTML sets up the basic layout of the multi-language website, including content sections with data attributes for translation keys, and buttons for language switching. It links to the CSS and JavaScript files.

Task 6 – Online Examination System

Create an online exam interface.

Requirements:

• Timer, questions, and submission.

• Prevent multiple submissions.

• Use AI to:

o Manage exam state.

o Improve exam UX.

o Ensure accessibility.

Online Examination System HTML Structure (index.html)

This HTML sets up the basic layout for the online exam, including a header with a timer, a main section for questions and navigation, and a submission button. It links to the CSS and JavaScript files.

[24] ✓ 0s

```
html_code = """
<!DOCTYPE html>

Online Examination System JavaScript Logic (script.js)

This JavaScript manages the exam flow: displaying questions, starting and stopping a timer, recording user answers, calculating results, and preventing multiple submissions using `localStorage` to manage the exam state. It also includes basic UX enhancements.

Instructions to View Your Online Examination System

1. **Run the Python cells above:** This will create three files in your Colab environment: `index.html`, `style.css`, and `script.js`.
2. **Download the files:**
   - In the Colab file browser (the folder icon on the left sidebar), locate `index.html`, `style.css`, and `script.js`.
   - Right-click on each file and select 'Download'.
3. **Open `index.html`:** Once downloaded to your computer, open the `index.html` file with your web browser (e.g., Chrome, Firefox, Edge).

You should now see your online examination system. Attempt the questions, use the navigation, and observe the timer. Try submitting and then refreshing the page to see how it prevents multiple submissions and retains your state!
